Colors.red[100];

Colors.redAccent[400];

ColorSwatch A color that has a small table of related colors called a "swatch".

/// For this app, the only category (endpoint) we retrieve from an API is Currency. ▼ 4 1:48 const apiCategory = { Length Input **final** backgroundColor = Colors.green[100]; Meter /// This is the "home" page of the Unit Converter. It shows a header bar and /// a grid of [Categories]. class CategoryRoute extends StatefulWidget { final bool footer; const CategoryRoute({ Output this.footer, }); aoverride _CategoryRouteState createState() => _CategoryRouteState(); Millimeter class CategoryRouteState extends State<CategoryRoute> { // Dart Usage, see https://www.dartlang.org/guides/language/effective-dart/usage final categories = <Category>[]; static const baseColors = <ColorSwatch>[ColorSwatch(0x33579186, { 50: Color(0x33579186), 100: Color(0xFF0ABC9B). 'arrows': Color(0xFF20877E), 'border': Color(0xFF20877E),

Google

```
var brandColors = ColorSwatch(0xFF4285F4, {
   'brandBlue': Color(0xFF4285F4),
   'brandRed': Color(0xFFEA4335),
   'brandYellow': Color(0xFFBBC04),
   'brandGreen': Color(0xFF34A853),
});
```

TextField

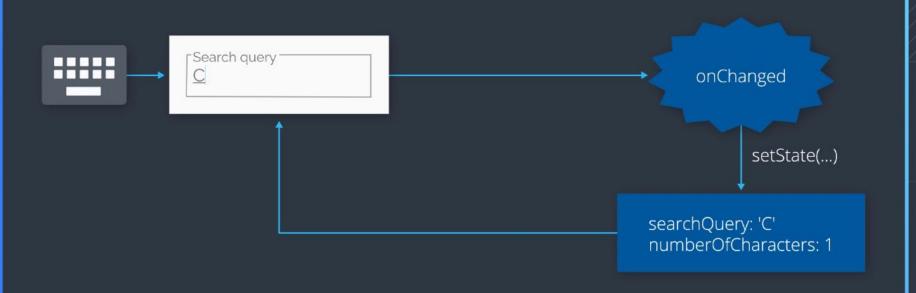

User Interaction

- Text input
- Dropdowns
- Gestures
- Interacting with data
- Radio buttons
- Sliders

```
TextField(
  keyboardType: TextInputType.number,
  onSubmitted: (testo){},
  onChanged: (testo){},
  onEditingComplete: (){},
  controller: myController,
  decoration: InputDecoration(
    labelText: "Input",
```

onChanged

onChanged

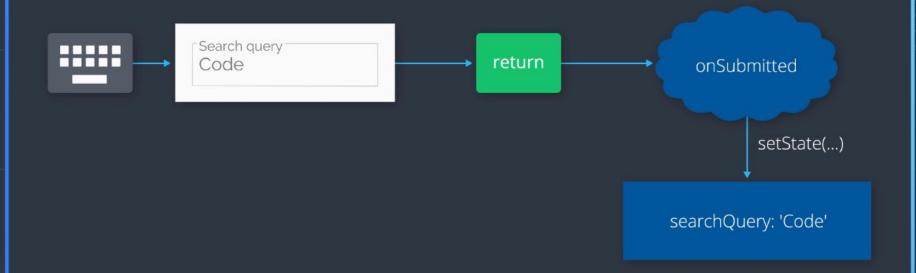

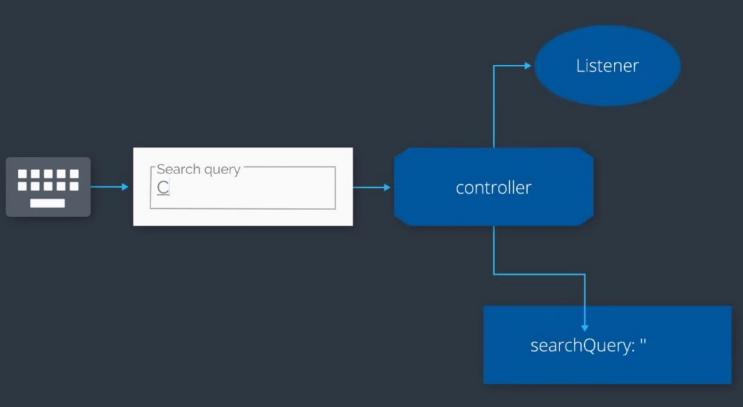

onSubmitted

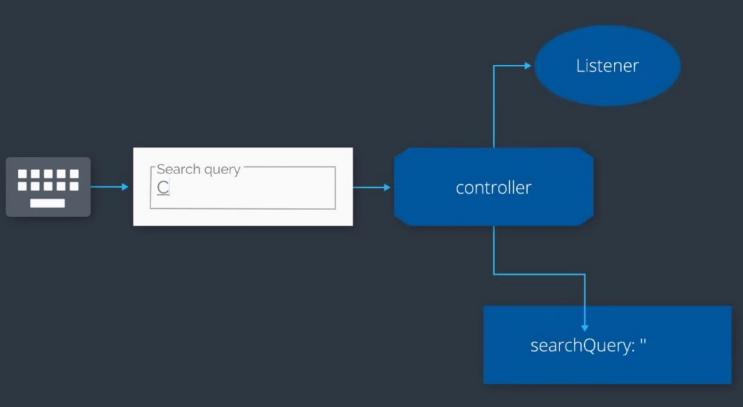

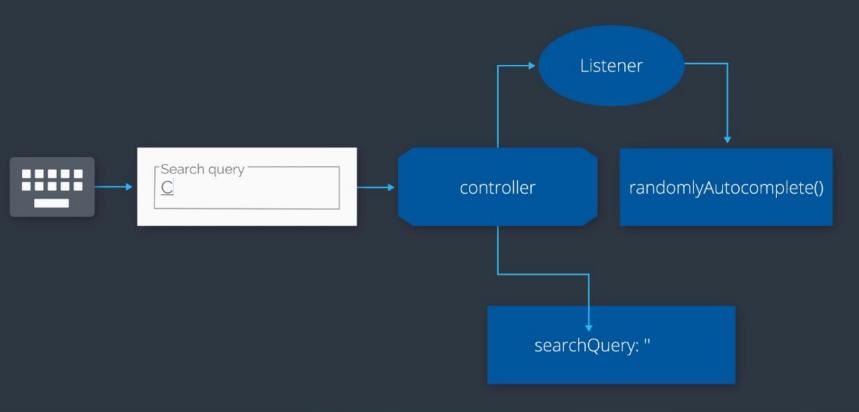

searchQuery: "

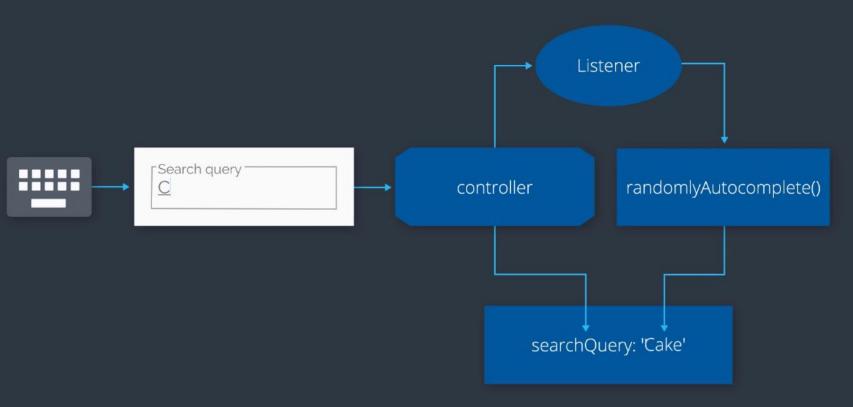

onSubmitted

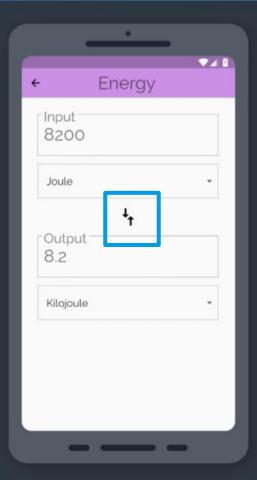

Let's see a Textfield and a Dropdown
